

Pathways to a Sustainable City - Helsinki

Outi Silfverberg

Helsinki Greens

29.6.2012, Thessaloniki

Ecologically and Socially Sustainable Cities:

- Dense city structure
 - More city and less scattered residential development
- Efficient use of energy and renewable sources
- Low segregation (mixtures of different housing modes, positive discrimination: special support for challenging schools and areas)
- Open green and public space
- Strong public sector (open for new service models)
- Transparency in decision making and active local democracy and participation
